Faculty of Agriculture and Life Sciences at Lincoln
University in New Zealand

IMPROVING SOIL PHOSPHORUS USE EFFICIENCY IN AGROECOSYSTEMS

Thursday, July 30th ALEX 265 at 3 pm

Leo's major research interest is biogeochemistry of soil organic carbon and phosphorus in natural and managed ecosystems. This research has an emphasis on the nature, dynamics and bio-availability of organic and mineral forms of nutrients in the soil-plant system in relation to soil management and land use.

"All are welcome to join us in the grad lounge afterwards for some snacks and refreshments, sponsored by SES in celebration of the International Year of Soil".
